NEWS

WTI Oil weakens as Middle East export recovery tempers supply risk concerns- West Texas Intermediate (WTI) US Oil falls 3.25% on Friday and trades around \$69.05 at the time of writing, after hitting its lowest level since late February at \$68.48 earlier in the day. The Crude Oil extends its weekly decline as investors increasingly price in a recovery in global supply following the disruptions caused by the conflict with Iran.

Market sentiment has improved as Oil flows through the Strait of Hormuz continue to recover. QatarEnergy has launched its first July-August Crude tender since the conflict began, while Saudi Aramco has resumed loadings at its Ras Tanura terminal after several months of disruption. These additional volumes come on top of new supplies from Iraq, Kuwait and Abu Dhabi, reinforcing expectations of a stronger supply outlook.

US Energy Secretary Chris Wright also said that tanker traffic through the Strait of Hormuz has returned to levels close to those seen before the conflict, with around 20 million barrels transiting the waterway on Wednesday. He also stated that Venezuelan Oil production is increasing rapidly and could continue to grow through the end of US President Donald Trump's term, adding to expectations of a stronger global supply.

Despite the improved sentiment, several banks remain cautious. Commerzbank argues that the market is underestimating supply risks, noting that tanker traffic data still do not point to a full normalization of shipping activity. The bank also highlights that combined US inventories of Crude Oil, gasoline and distillates remain around 7% below their seasonal average, a factor that could support prices if exports recover more slowly than expected.

Gold remains bid and close to \$4,100- The US Bureau of Economic Analysis (BEA) reported on Thursday that the Personal Consumption Expenditures (PCE) Price Index accelerated from the 3.8% YoY rate to 4.1% in May. Moreover, the core gauge, which excludes volatile food and energy prices, rose 3.4%. Investors believed that inflation likely peaked last month or is close to doing so in the face of the recent fall in Crude Oil prices to pre-war levels following an interim US-Iran peace deal. This led to a marginal uptick in bets that the Fed will hold rates steady, prompting some USD profit-taking.

Nevertheless, the CME Group's FedWatch Tool indicates that traders are still pricing in over an 80% chance that the US central bank will raise borrowing costs at least once by the end of this year. The bets were reaffirmed by comments from Chicago Fed President Austan Goolsbee that underlying inflation pressures are still too high and trending in the wrong way. Moreover, New York Fed President John Williams pushed back his expectation of getting inflation back to the 2% target and said that inflation remains too high, though it is likely to moderate this year. Meanwhile, reports that Iran's Islamic Revolutionary Guard Corps (IRGC) attacked a Singapore-flagged cargo ship in the Strait of Hormuz reignited worries about the sustainability of the preliminary US-Iran peace deal. This, in turn, should help limit any meaningful losses for the USD and cap the upside for the Gold price. Moreover, the aforementioned fundamental backdrop favors bearish traders and backs the case for the emergence of fresh selling at higher levels. Nevertheless, the XAU/USD pair remains on track to register losses for the fourth consecutive week.

TECHNICALS TIPS

XAUUSD: Gold is trading around **4090** after a notable correction from recent highs and is currently attempting to establish a base above a major long-term support zone. The weekly price structure remains in a consolidation phase, with buyers defending lower levels while sellers continue to cap rallies near key resistance. The next medium-term move is likely to depend on whether gold breaks above resistance or loses critical support.

Technically, the **20-week EMA** is flattening and continues to act as immediate resistance, while the **50-week EMA** remains below current prices, providing long-term structural support. The **RSI (14)** is hovering around **45–50**, indicating neutral momentum after recovering from weaker levels. Meanwhile, the **MACD** remains below its signal line but is showing signs of stabilization, suggesting that bearish momentum is slowing and a trend reversal could develop if buying interest increases.

On the upside, immediate resistance is located at 4150–4220. A sustained weekly close above 4220 could strengthen buying momentum and open the door toward 4300–4380, with further upside potential near 4450. On the downside, major support is seen at 4020 followed by 3950, and a weekly close below 3950 may increase selling pressure toward 3880–3800.

CRUDE OIL WTI- WTI crude oil is trading around **69.50** after a prolonged correction and is currently attempting to stabilize near a significant long-term support zone. The weekly chart suggests that the market is in a consolidation phase, with buyers defending lower levels while sellers remain active near overhead resistance. A decisive breakout from the current range is likely to determine the next medium-term trend.

Technically, the **20-week EMA** is acting as immediate resistance, indicating that short-term momentum remains subdued, while the **50-week EMA** is close to the current price and may provide dynamic support. The **RSI (14)** is hovering around **45–50**, reflecting neutral momentum with no strong directional signal. Meanwhile, the **MACD** remains below the zero line but is beginning to flatten, suggesting that bearish momentum is gradually losing strength.

On the upside, immediate resistance is placed near 71.20–73.00. A sustained weekly close above **73.00** could trigger fresh buying momentum toward **75.50–78.00**. On the downside, **major support is seen near 68.00** followed by **65.50**, and a weekly close below **65.50** may increase selling pressure toward **63.00–60.00**.

Current Outlook: Crude oil is trading near a crucial long-term support zone. Holding above **68.00** could encourage a recovery, while a weekly close below **65.50** would strengthen the bearish outlook and increase the risk of further downside.
